Public Comment

Date May 13, 1998

The CALFED Bay-Delta Program welcomes your participation. Please use the space below for your written comments (attach additional sheets if necessary).

Comments: As water quality to Southern California should be a primary concern of changes in the Delta, a canal from Oroville Lake or lower Feather River should be the obvious choice.
Plan III only improves the water quality slightly as Sacramento City puts treated sewage into the river above the proposed canal mouth and the whole Sacramento River above the mouth contains farm run off consisting of manures, pesticides, herbicides, sewage and who knows what.
The Oroville Dam is part of the system built in the early sixties to store water for So. Cal. Let's use this water as it is the best available.
The canal extension will cost more money. So be it, the public health is worth it and should be number one.
Also a canal isolated from the Delta water should lessen the amount of fish lost to the pumps at Tracy. This would improve water quality also.
